

## **Guidance/Teaching Programme for the Students of Government Sen. Sec. Schools of Katindhi and Kataula, Mandi**

Started on: 15<sup>th</sup> November, 2014-Till Continue

“Education is not about learning diverse subjects. It is about learning diverse ways to the same subject.”

—Aurobindo

In the continuation of guidance/teaching programme started on 23<sup>rd</sup> Sept., 2013 for government school students, NSS Unit IIT Mandi decided to guide/teach the students of 10+1 and 10+2 Government Sen. Sec. School Katindhi and Kataula. The guidance/teaching program was started on 15<sup>th</sup> November, 2014. The guidance/teaching program has overseen the strength of about 75 students. The students are being taught by many B.Tech students and a lot more research scholars are also contributing to this program by covering some major topics. Some faculty members also took an active part in this programme.

Volunteers are teaching the government school students

These students have also been taught in small classrooms through Power Point Presentation to make them aware about the new methods/ways of teaching and learning. The students are encouraged to be curious, raise questions about how the nature works and the reasoning behind observable phenomena. The students are being taught how to find the answers to their questions, as this the most important skill that will accompany them through the rest of their lives. Off course, such a program needs evaluation too, therefore tests are being conducted to check the students' progress, both academic as well as intellectual with the emphasis that the program achieves its goal. So, far this is going on smoothly. NSS unit IIT Mandi is committed to do its best for the society (particularly for the Himalayan region) in all sorts of ways possible.
